Transactional Control Commands

Transactional Control Commands are only used with DML Commands such as INSERT, UPDATE, and DELETE only. They cannot be used while creating tables or dropping them because these operations are automatically committed in the database.

The Commit Command

* The Commit Command is the transactional command used to save changes invoked by a transaction to the database.

* The COMMIT command is the transactional command used to save changes invoked by a transaction to the database.

The ROLLBACK Command:

The ROLLBACK Command is the transaction Command used to undo transactions that have not already been saved to the database. This Command can only be used to undo transaction since the last COMMIT or ROLLBACK Command was issued.

The SAVEPOINT Command

The SAVEPOINT is a point in a transaction when you can roll the transaction back to a certain point without rolling back the entire transaction.

The RELEASE SAVEPOINT Command

The RELEASE SAVEPOINT Command is used to remove a SAVEPOINT that you created.
